Memo to File:

RE: Inspection of Mine Site
Western International Corp.
ACT/043/016 005
Summit County, Utah

Tom Tetting and Wayne Hedberg of the Division inspected the above mentioned mine site for evidence of operation. It has been nearly one year (August 7, 1981) since final approval was issued. The inspection was performed at the request of the Aetna Life and Casualty Company as they requested release of the surety bond held by the Division. There was no evidence of any mining or assessment work on the site. The Company has not filed an annual operations and progress report (MR-3) for the calendar year 1981 as required by 40-8-15(2). If the company has not initiated mining activities by the end of the second year the Division and the Board may withdraw the approval for the operation or grant an additional extension of time.

The contact at Aetna Life, Lisa Miller, was notified that an inspection had taken place and no mining had occurred. Her understanding of the situation was that the company no longer wished to pay premiums of the bond and, therefore, would like to have it cancelled. She was notified that the company, Western International, should contact the Division if this was the case. If the bond were cancelled it is recommended that the approval to mine be withdrawn.
